

MEDHOST Emergency Department Information System Receives 08 CCHIT Certification

Easy to use software meets functionality, interoperability and security requirements

ADDISON, Texas – May 14, 2009 – The Certification Commission for Health Information Technology (CCHIT®) today announced that MEDHOST’s product, MEDHOST EDIS version 4.2, is a CCHIT Certified® 08 Emergency Department Electronic Health Record (EHR). The Certification Commission is a private non-profit organization recognized by the federal government as an official certification body for healthcare information technology (HIT) products. CCHIT Certified product certification designates that a healthcare information technology product has been tested against a comprehensive set of functionality, interoperability and security criteria and has passed inspection of 100 percent of the criteria.

MEDHOST’s easy-to-use EDIS makes hospitals more efficient by reducing medical errors, increasing patient throughput, producing higher patient satisfaction scores and maximizing revenue. With touch screen navigation, IV infusion logic, risk alerts, an exclusive administrative ToolKit application that allows for real-time changes to the software, and more, MEDHOST has revolutionized more than 170 EDs, making them more productive, profitable and conducive to providing superior levels of patient care.

“MEDHOST Customers consistently cite how easy our EDIS is to use, and their significant workflow, communication and revenue improvements are a testament to how our solution is making meaningful changes each and every day,” said Craig Herrod, president and CEO of MEDHOST. “We believe that achieving CCHIT Certification further validates MEDHOST’s dedication to providing a system that supports clinical, operational, financial and patient care needs. We are honored to receive this certification and excited to work alongside the Certification Commission to support the movement for advancing healthcare IT.”

The Certification Commission’s mission is to accelerate the adoption of robust, interoperable healthcare information technology throughout the United States by creating an efficient, credible, sustainable mechanism for the certification of healthcare IT products.
